Access Total Views for a Session

1. From your Panopto folder, hover your cursor over the title of the session.
2. Click Stats.

3. You will see two graphs. One indicating views by day and the other indicating views by video time. Below the graphs you will see individual viewers. You will see the name of users who were logged in when they viewed the recording or the IP address of the computer that accessed the recording. If your students access your Panopto recording through Sakai, they will be logged in and you will see their names.

4. To view the acuity of an individual user, click on the users’ name.

5. You will then see the sessions the student has viewed, how many times they viewed each session, and how many minutes they viewed of each session.
