Course Site

A course site is the official work site for a particular academic course and is limited to a specific academic term. Course sites are created and populated with both instructors and students automatically, based on a regular LOCUS feed.

Course sites have a number of tools in the menu by default:

- Home
- Syllabus
- Schedule
- Announcements
- Resources
- Assignments
- Tests & Quizzes
- Gradebook
- Wiki
- Site Info
- Blogs
- Forums
- Lessons
- Messages
- Podcasts
- Help

Other tools can be added using Edit Tools in the Site Info tool.

There are a number of roles for users in Sakai course sites that can be assigned in LOCUS or by a Sakai system administrator:

<table>
<thead>
<tr>
<th>Instructor</th>
<th>TA</th>
<th>Student</th>
<th>Course Builder</th>
<th>Librarian</th>
<th>Tutor</th>
</tr>
</thead>
<tbody>
<tr>
<td>read, revise, delete and add content to a site</td>
<td>read, add, and revise most content in their sections</td>
<td>read content, and add content to a site where appropriate</td>
<td>Can read, revise, delete and add content to a site.</td>
<td>Can read and add content and create and grade tests.</td>
<td>Can read content and add content to a site where appropriate.</td>
</tr>
</tbody>
</table>
Sakai Course Sites and Project Sites

**Project Site**

A project site is not limited to a specific academic term, and can be used to collaborate with colleagues inside and outside of the Loyola community for group work, committees, and research projects. Examples of uses of project sites are university committees, registered and sponsored student organizations, student groups, communities, organizations, collaborative research projects, training initiatives, and groups of instructors who will be teaching lab sections.

All Loyola students, faculty, and staff users can create a project site.

Project sites have only two tools in the menu by default:
- Home
- Site Info

All of the tools available for a course site can also be added to a project site using **Edit Tools** in the **Site Info** tool.

Project sites have two roles for users:

<table>
<thead>
<tr>
<th>Maintain</th>
<th>Access</th>
</tr>
</thead>
<tbody>
<tr>
<td>read, revise, delete and add</td>
<td>read content, and add content to a site</td>
</tr>
<tr>
<td>content to a site</td>
<td>where appropriate</td>
</tr>
<tr>
<td>mark content as public or private</td>
<td></td>
</tr>
<tr>
<td>Add and delete participants</td>
<td></td>
</tr>
<tr>
<td>Add and delete permissions</td>
<td></td>
</tr>
</tbody>
</table>
