Whenever your cursor or pen is not matching up with the location you are pointing at on the SMART Board, the SMART Board needs to be recalibrated.

**Recalibrate the SMART Board**

1) Press the **Orientation Button** located on the SMART Board Tray.

2) With the pen tool, select each of the individual alignment points directly in the center of the box.

3) The SMART Board should now be accurate when making selections or drawing.
Change the Orientation Level

When recalibrating the SMART Board, you can change the number of alignment points you have to click on. The more points you have, the more accurate the orientation will be. The less points you have, the faster the calibration, but the less accurate the orientation will be.

To change the number of points you have to click on during recalibration:

1) Press the **Help Button** located on the SMART Board Tray.

   ![Help Button](image)

   **Click the Help Button**

2) A new window will pop up. Select the **Smart Hardware Settings**.

3) Select the drop down menu and select **Orientation/Alignment Settings**.

4) Then choose between Quick - 4 points, Standard - 9 points, Wide - 12 points, and Fine - 20 points.
