Payday Lenders Under Attack, Seek Protection in Cyberspace

Payday loan companies, who lure low-income consumers with fast-cash, are now looking to the Internet to avoid tightening state regulations.¹ Recent state efforts aimed at capping the normally exorbitant interest rates typically charged by short-term loan financial institutions have driven this turn to the Internet.² Recently, West Virginia Attorney General Darrell McGraw attempted to prohibit out-of-state financial companies from doing business via the Internet with West Virginia consumers.³ McGraw filed suit to enforce investigative subpoenas in connection with fourteen Internet financial lenders and “to enjoin their usurious lending activities in his state.”⁴

Payday loans are short-term loans usually intended to provide a financial bridge for low-income consumers from paycheck to paycheck.⁵ A borrower obtains a payday loan and in return writes the lender a check post-dated to the date of the borrower’s next payday.⁶ When the loan is due, the lender either deposits the check or debits the borrower’s account, or the borrower pays the lender the amount owed plus the interest accrued.⁷ When the borrower does not have

sufficient funds in her bank account to repay the payday loan and notifies the lender of this, the lender often will give the borrower the option to refinance the loan with a payment of an additional fee. If the lender attempts to deposit a check from the borrower and the check bounces, an additional charge will normally be added to the borrower’s outstanding debt.

The convenience of payday loans is often negatively outweighed by the high interest rates charged by the majority of financial lenders. Payday loans have short terms to maturity, and the annual percentage rate (APR) is usually very high.

When initiating a loan, many payday lenders do not perform an in-depth credit history analysis of the potential borrower. Rather, many lending institutions merely want proof that the borrower is the recipient of a regular paycheck. As a result, many payday lenders have been accused of preying on low-income individuals and families who are in need of quick cash and willing to pay high-interest rates in order to obtain it.

The combination of low-income borrowers, high interest rates, and deferred payment periods often leads to financial turmoil for many individuals choosing to take out a payday loan. Recently, the Dan Rather Reports ran a segment on the payday loan industry. The report featured a woman with multiple sclerosis living in Portland, Oregon who took out a payday loan of $150 in order to purchase orthopedic shoes. When the loan’s repayment was due, the woman lacked the money and decided to take out another payday loan to pay off the first one. This perpetual borrowing cycle con-

The woman commented, “I just went right across the street and borrowed the money. It was that easy. Only takes about 20 minutes. They’re nice. They have candy.” Eventually, the woman owed money to nine different payday loan institutions and, due to the accumulated service charges, all of the money from her regular social security checks went to her lenders. Consequently, the $140 shoes she purchased with the initial loan cost her over $2,000.

Borrowing nightmares such as this caused many states to crack down on lending institutions offering quick cash at unreasonable interest rates. In Illinois, the Payday Loan Reform Act (PLRA) came into effect in December of 2005. Illinois Governor Rod Blagojevich stated, “[w]hen a working family looks for financial assistance to help them get through a hard time, they shouldn’t end up in worse debt. But that’s what was happening all over Illinois when payday lenders were free to charge outrageous interest rates and collect hidden fees.”

The PLRA now allows indebted Illinois consumers the option of choosing a no-interest payment plan to get caught up in their payments without additional interest. Furthermore, the PLRA does not allow lending institutions to charge interest rates higher than $15.50 per $100 loan. The PLRA also limits the additional fees and charges lending institutions may charge for late payments and lack of sufficient funds. Since the PLRA has been signed into law, Illinois consumers have saved approximately $6.4 million in loan fees and interest charges.

29 Blagojevich’s Payday Lending Reforms Save Illinois Borrowers $6.4 Million, supra note 24 (noting that in the past 10 months, Illinoisians have borrowed $136 million in payday loans and have paid approximately $20.8 million in loan fees and interest charges. The average Illinois payday loan is for $334.69, and the
Similarly, Florida passed a cash-advance law in 2001 that limits people to one $500 loan at a time and limits lenders to a 10 percent interest rate. Furthermore, the Florida law prohibits lenders from transferring unpaid loan balances onto the balance of a second loan.

Other states have passed laws making it harder for lending institutions to recover large amounts of money from borrowers in court proceedings. In California, Attorney General Bill Lockyer recently filed a $2 million suit against Fast Cash, a payday lender, due to Fast Cash’s suits against borrowers where it demanded treble damages. Normally, California law enables a plaintiff to obtain treble damages against a defendant who has bounced a check. However, in California, payday lenders are limited to recovering only the amount due with an additional $15 fee. Fast Cash sued 400 individuals and received treble damages. Currently, Lockyer is suing to get that money back for the borrowers.

While state governments are attempting to curtail what they perceive as predatory lending by payday lenders, many payday lenders have simply moved online to avoid state regulations. Many lenders operate payday Internet sites in states with lax restrictions in order to do business in states with more stringent regulations. Some online lenders operate under disclosure statements that inform borrower pays about $51.07 in fees and interests, or $15.30 for ever $100 borrowed. Before the PLRA took effect, the average fee for short term loans was $20 per $100 borrowed. Had the law not been in effect, Illinois consumers would have paid $27.2 million in loan fees and interest charges on that money).

the consumer that they are operating under the laws of a given state, even if the consumer is not located in that state.\(^\text{40}\) For example, one online lender has a disclosure statement on its website that notes, “[a]ll aspects and transactions on this site will be deemed to have taken place in our office in the State of Delaware, regardless of where you may be viewing or accessing this site.”\(^\text{41}\) However, many people believe that payday lenders operating on the Internet should be subject to the same state regulations to which payday lenders operating storefronts within the state are subject.\(^\text{42}\) Prentiss Cox, a former Minnesota assistant attorney general says, “‘if they’re making the loan to Minnesota residents, there’s no reason that Internet payday lenders shouldn’t be complying with the laws.’”\(^\text{43}\)

This is the message that West Virginia Attorney General Darrell McGraw is trying to send to Internet lenders in West Virginia.\(^\text{44}\) McGraw recently reached settlement agreements with eighteen Internet payday lenders in which the lenders promised that they would stop lending via the Internet in West Virginia and would refund any unlawful fees and charges to West Virginia consumers.\(^\text{45}\) Now, with the recent suit to enforce investigative subpoenas against fourteen other Internet lenders, McGraw has commenced a legal battle to try and force other lenders to comply with West Virginia law.\(^\text{46}\) In a recent release, McGraw stated, “[l]ast year we launched a major initiative to combat companies that were using the Internet to circumvent the laws of West Virginia intended to protect consumers from usurious loans. Today, we have sent a message that loans made to West Virginia consumers over the Internet must comply with our laws. We will take whatever legal action is necessary to protect our consumers from Internet predators.”\(^\text{47}\)

Seeking Cheaper Alternatives to Prescription Drugs North of the Border

For the past year, the Department of Homeland Security has been seizing prescription drugs shipped from Canada. While it has been illegal for American consumers to import prescription drugs into the United States for years, U.S. Customs ignored the shipment of small amounts of prescription drugs for personal use. In the last year or two, however, many drug companies began complaining about the large increase in Canadian imports and, as a result, U.S. border authorities began aggressively seizing the drugs under anti-terrorism laws.

Recently, Congress inserted a provision into the Homeland Security appropriations bill providing that individuals will be allowed to re-enter the United States from Canada with a maximum of a 90-day supply of prescription drugs. The legislation would only apply to individuals entering the country while in possession of the prescription drugs and would not apply to prescription drugs being sent through the mail. However, federal officials have publicly stated that they will stop seizing prescription drugs that are sent through the mail from Canada to the United States.

This change in policy is likely good news for the consumers of prescription drugs including the elderly who have been facing steep U.S. drug prices. A report released by the AARP in 2005

52 Hood, supra note 53.

53 Id.

54 Id.

55 AARP: Drug Prices Still Rising, Consumer Affairs, November 2, 2005,
stated the prices for brand name prescription drugs are rising at an average rate that is much greater than inflation.\textsuperscript{56} In the past few years, the increase in the cost of prescription drugs in the U.S. has caused many consumers to look towards Canada in order to find a cheaper alternative.\textsuperscript{57} For example, in 2003, approximately $695 million in prescription drugs crossed the U.S.-Canadian border headed to U.S. consumers.\textsuperscript{58} Furthermore, twelve million drug prescriptions were sold from Canadian pharmacies to the U.S.\textsuperscript{59}

Prescription drugs cost Canadians approximately 62 percent less than Americans.\textsuperscript{60} The low prices charged for Canadian prescription drugs can be partly attributed to the fact that a Canadian government review board puts a limit on the amount drug manufacturers can charge.\textsuperscript{61} Furthermore, the Canadian government purchases one-third of the prescription drugs sold in Canada and distributes them to elderly Canadian citizens.\textsuperscript{62} However, some experts state that allowing shipments of prescription drugs to come into the United States via Canada would not necessarily mean large savings for U.S. consumers.\textsuperscript{63} A 2004 study conducted by the Congressional Budget Office found that “allowing drug imports from a broad set of countries would cut drug spending by $40 billion over 10 years, or by about 1%. Limiting it to Canada would produce a ‘negligible reduction’ in drug spending, it found.”\textsuperscript{64}

Many U.S. consumers who choose not to ship or transfer medication from Canada are seeking cheaper alternatives such as ge-

\textsuperscript{56} Id. (noting that the sharpest price increases were for the drug Atrovent, which rose at 18.6 percent, and Ambien, which climbed 14.4 percent for the first six months of 2005. Among the best sellers, Procter and Gamble’s Actonel rose 7.5 percent, Lilly’s Evista jumped 6.2 percent and AstraZeneca’s Toprol XL increased 6 percent).

\textsuperscript{61} Id.

\textsuperscript{62} Importing Prescription Drugs—The Fair and Safe Alternative, supra note 64.

\textsuperscript{64} Id.
Generic forms of medication. Generic forms of medication often cost consumers between 30 and 60 percent less than brand-name products.\textsuperscript{65} Recently, Wal-Mart began expanding its distribution of generic drugs through its pharmacies nationwide.\textsuperscript{66} Generic drugs are now available in 3,009 Wal-Mart pharmacies in 38 U.S. states.\textsuperscript{67}

The recent influx of cheaper Canadian prescription drugs and the wide availability of generic drugs have led some U.S. pharmacies to drop their prices.\textsuperscript{68} One Florida pharmacy has said that it will sell prescription drugs at a price 5 percent lower than that of Wal-Mart and Target.\textsuperscript{69} Also, the pharmacy claims that it will sell the same generic drugs that Wal-Mart and Target are selling for $4.00 to consumers for only $3.79.\textsuperscript{70}

Whether the Florida pharmacy will start a trend of U.S. pharmacies offering cheaper prescription drugs within the United States or whether U.S. consumers will have to continue to ship prescription drugs from Canada is a question that remains to be answered. In any event, the recent leadership changes in Congress should lead to renewed talks concerning the imports of prescription drugs from Canada and other foreign countries offering less expensive alternatives to consumers.\textsuperscript{71}
